PATENT
Atty. Dkt. No. APPM/008245/DSM/BCVD/JP

IN THE CLAIMS:

Please cancel claims 2 and 10, and amend the claims as follows:

1. (Currently Amended) A method for processing a substrate in a processing chamber, comprising:

forming a-conductive material an aluminum-containing layer on a surface of the substrate:

depositing an amorphous carbon layer on the conductive material aluminum-containing layer by a method comprising:

introducing into the processing chamber one or more hydrocarbon compounds having the general formula C_xH_y , wherein x has a range of 2 to 4 and y has a range of 2 to 10; and

generating a plasma of the one or more hydrocarbon compounds by applying power from a dual-frequency RF source;

etching the amorphous carbon layer to form a patterned amorphous carbon layer; and

etching feature definitions in the conductive material aluminum-containing layer corresponding to the patterned amorphous carbon layer.

2. (Canceled)

- 3. (Previously Presented) The method of claim 6, wherein the first frequency is provided at a power between 200 watts and 800 watts and the second frequency is provided at a power between about 1 watt and about 200 watts.
- 4. (Previously Presented) The method of claim 1, wherein the one or more hydrocarbon compounds are selected from the group consisting of propylene (C_3H_6), propyne (C_3H_4), propane (C_3H_8), butane (C_4H_{10}), butylene (C_4H_8), butadiene (C_4H_6), acetylene (C_2H_2), and combinations thereof.

PATENT Ally. Dkt. No. APPM/008245/DSM/BCVD/JP

- 5. (Previously Presented) The method of claim 1, further comprising introducing an inert gas with the one or more hydrocarbons into the processing chamber.
- 6. (Previously Presented) The method of claim 1, wherein the dual-frequency RF source comprises providing a first frequency between about 10 MHz and about 30 MHz and a second frequency between about 100 KHz and about 500 KHz.
- (Original) The method of claim 1, wherein the etch selectivity of amorphous 7. carbon to the conductive material is between about 1:3 and about 1:10.
- 8. (Original) The method of claim 1, wherein the amorphous carbon layer comprises an anti-reflective coating.
- 9. (Currently Amended) A method for processing a substrate in a chamber, comprising:

forming a conductive material an aluminum-containing layer on a surface of the substrate:

depositing an amorphous carbon hardmask on the conductivo material aluminum-containing layer by a method comprising:

introducing into the processing chamber one or more hydrocarbon compounds having the general formula C_xH_y, wherein x has a range of 2 to 4 and y has a range of 2 to 10; and

generating a plasma of the one or more hydrocarbon compounds by applying power from a dual-frequency RF source;

depositing an anti-reflective coating on the amorphous carbon hardmask;

depositing a patterned resist material on the anti-reflective coating;

etching the anti-reflective coating and amorphous carbon hardmask to the conductive material aluminum-containing layer; and

etching feature definitions in the conductive material aluminum-containing layer.

10. (Canceled)

. PATENT
Attv. Dkt. No. APPM/008245/DSW/BCVD/JP

- 11. (Previously Presented) The method of claim 14, wherein the first frequency is provided at a power between 200 watts and 800 watts and the second frequency is provided at a power between about 1 watt and about 200 watts.
- 12. (Previously Presented) The method of claim 9, wherein the one or more hydrocarbon compounds are selected from the group consisting of propylene (C_3H_6), propyne (C_3H_4), propane (C_3H_8), butane (C_4H_{10}), butylene (C_4H_8), butadiene (C_4H_8), acetylene (C_2H_2), and combinations thereof.
- 13. (Previously Presented) The method of claim 9, further comprising introducing an inert gas with the one or more hydrocarbons into the processing chamber.
- 14. (Previously Presented) The method of claim 9, wherein the dual-frequency RF source comprises providing a first frequency between about 10 MHz and about 30 MHz and a second frequency between about 100 KHz and about 500 KHz.
- 15. (Original) The method of claim 9, wherein the anti-reflective coating is a material selected from the group of silicon nitride, silicon carbide, carbon-doped silicon oxide, amorphous carbon, and combinations thereof.
- 16. (Previously Presented) The method of claim 9, further comprising depositing a barrier layer prior to depositing the conductive material layer.
- 17. (Previously Presented) The method of claim 9, further comprising removing the resist material prior to etching feature definitions in the conductive material layer.
- 18. (Original) The method of claim 9, wherein the etch selectivity of amorphous carbon to the conductive material is between about 1:3 and about 1:10.

PATENT Atty. Dkt. No. APPM/008245/DSM/BCVD/JP

19. (Previously Presented) A method for processing a substrate in a chamber, comprising:

forming an aluminum-containing layer on a surface of the substrate;

depositing an amorphous carbon hardmask on the aluminum-containing layer by a method comprising:

introducing into the processing chamber one or more hydrocarbon compounds having the general formula C_xH_y, wherein x has a range of 2 to 4 and y has a range of 2 to 10; and

generating a plasma of the one or more hydrocarbon compounds by applying power from a dual-frequency RF source;

depositing an anti-reflective coating on the amorphous carbon hardmask, wherein the anti-reflective coating is a material selected from the group of silicon nitride. silicon carbide, carbon-doped silicon oxide, amorphous carbon, and combinations thereof:

depositing a patterned resist material on the anti-reflective coating;

etching the anti-reflective coating and amorphous carbon hardmask to the aluminum-containing layer;

removing the resist material;

etching feature definitions in the aluminum-containing layer at an etch selectivity of amorphous carbon to the aluminum-containing between about 1:3 and about 1:10; and

removing the one or more amorphous carbon layers by exposing the one or more amorphous carbon layers to a plasma of a hydrogen-containing gas or an oxygencontaining gas.

(Previously Presented) The method of claim 19, wherein the one or more 20. hydrocarbon compounds are selected from the group consisting of propylene (C₃H₅), propyne (C_3H_4), propane (C_3H_8), butane (C_4H_{10}), butylene (C_4H_8), butadiene (C_4H_6), acetylene e (C_2H_2) , and combinations thereof.

PATENT Atty. Dkt. No. APPM/008245/DSM/BCVD/JP

- (Original) The method of claim 19, further comprising introducing an inert gas 21. with the one or more hydrocarbons into the processing chamber.
- (Previously Presented) The method of claim 19, wherein the generating a plasma 22. comprises applying power from a dual-frequency RF source comprises providing a first frequency between about 10 MHz and about 30 MHz at a power between 200 watts and 800 watts and a second frequency between about 100 KHz and about 500 KHz at a power between about 1 watt and about 200 watts.
